HEDGE APPLE (Osage Orange)

[http://mullinslogcabin.net/hedgeapples\\_cancer](http://mullinslogcabin.net/hedgeapples_cancer)

How to prepare the hedgeapples for use

I get so many phone calls and emails from folks asking me how to prepare hedgeapples to eat, or how to preserve them. So this is what i do.

First of all, wrap the hedgeapple in freezer paper, or newspaper, put in freezer, and freeze solid.

Get your slaw grater, just like you are going to make coleslaw. Grate off the amount you want to eat. This makes it real mushy and you don't even have to chew it. Next i drink a glass of water, and wash my hands. The white sap can burn your eyes if you should put your fingers near your eyes. Most people that i have talked to are eating a tablespoon twice a day. There is no certain amount, or magic portion that you take. It's up to the individual. Some people just eat a teaspoon, others a tablespoon, and others even several whole hedgeapples in a few weeks time. The only side effect that i have heard of, some people get loose bowel movements. I'm not a doctor, but my theory is, that's just your body getting rid of the toxins. I personally don't think it has a bad taste at all. To me, it tastes a little like cucumbers. However, some people don't like the taste. If you are one of those people, then mix it with something you do like, for instance cottage cheese or applesauce. There is no guarantee that hedgeapples work for everyone, but for the majority of people it does work, and they are telling me that they can see a reduction of tumors within a month. Again, everyone is different. There are many things a person can do to slow down the growth of cancer. Some people go on an all alkaline diet, others drink baking soda water, and still others drink food grade peroxide. Go to this website to learn other alternatives. [www.earthclinic.com](http://www.earthclinic.com)

God bless you and your loved ones who are seeking answers.

If you have further questions, you can contact me at [logcabin1999@yahoo.com](mailto:logcabin1999@yahoo.com)

PS: I use the whole hedgeapple, peeling, inside, seeds and all. I don't waste any of it.

I ran into a couple from Walton, Kentucky at the Kentucky Wool Festival the 1st weekend in Oct.

They were telling me about several folks that they know of who have had excellent results with hedgeapples. Some people are in remission, and others have been given a clean bill of health. The gentleman drives a senior citizen bus and plans to bring a group of these folks out to my

log cabin in the Spring. They were so interesting to talk to.

I'm having concerns about people in the Augusta and Maysville area of Kentucky. I get more calls from this area than any other place in the US. What is going on in this area that is causing so many people to develop cancer? I pray that they can all be healed, and find their cancer before it's too late

This is for the folks who insist that hedgeapples are poisonous. My dad always told me to never eat a hedgeapple because they were poison. After eating the hedgeapple now for several years, i have come to realize that all the old folks were wrong. My theory is this. Farmers used to find dead cows and horses in the fields. They found them with hedgeapples in their throat. The animals didn't die from poison. They died from suffocation. The hedgeapples were lodged in their throats. If hedgeapples were poisonous, i would have been dead years ago. You will see squirrels, deer, and other animals eating the hedgeapples. Animals know what they can eat, and what's good for them. So, please don't worry about being poisoned by eating the hedgeapples or taking the capsules. You cannot overdose on them either. I know of people who used to eat a slice a day. another man that my husband knows ate 18 hedgeapples in just a few weeks, and guess what? He no longer has cancer.

---

Hello folks, just wanted to let you know that hedgeapples are on the trees now. In our area, they're about the size of an orange. You do not have to wait until Autumn when they fall to the ground. They are effective right now. I don't have any trees myself, but have seen them in other areas.

So, if you are in an area where they grow, which is usually anywhere in the USA East of the Mississippi. You can take them off the trees now and use them.

God bless each of you who are fighting this terrible disease. Don't give up, there is always hope.

I have acquired a limited number of hedgeapples. So if you live in an area where they don't grow and are interested in them. Please email me. Sorry, i can't send them to you free, since i am unemployed. However, if you send me \$10.00 per hedgeapple or 2 small ones, i will ship anywhere in the USA with the exception of Alaska and Hawaii. Two years ago I shipped a few and ended up in the hole. I wasn't thinking that it cost more to send to different parts of the US. So, to make sure that the shipping charges are sufficient, i would need \$10.00 per shipment. You can pay me by going to PayPal and entering your mailing information and my email address [logcabin1999@yahoo.com](mailto:logcabin1999@yahoo.com) or you can mail me a check at this address

Mulling Log Cabin  
1435 Denny Rd.  
Berry, KY 41003

Thank you, and may God bless each of you in your battle of healing cancer.

## Hedgeapples and Cancer

You are about to read true stories from people who have used hedgeapples to kill cancer cells in their bodies. You'll also see stories about animals who have been healed by eating hedgeapples. You'll also find pictures of hedgeapples, and reports of scientific studies using a chemical found in hedgeapples called "Tetrahydroxystilbene."

I am constantly giving my readers the latest stories of people who have been cured of cancer, or are in remission. If you have been healed of cancer or other diseases after eating hedgeapples, or taking the capsules, please email me, so that i can enter the information here.

It gives cancer patients hope to learn of others who have been healed or in remission. Thank you and may God bless each of you, who are reading my website today.

The email shown below is my most recent report. She lives in Burlington, KY  
Received September 9th, 2012

From: Judith  
To: Judy Mullins <[logcabin1999@yahoo.com](mailto:logcabin1999@yahoo.com)>  
Sent: Sunday, September 9, 2012 1:01 AM  
Subject: Re: Customer contact message for [www.mullinslogcabin.net](http://www.mullinslogcabin.net)

The gentleman I spoke of is about 70 yes. old & lives in Burlington Ky. He was diagnosed with amalignant tumor on his left lung. He went through a series of Chemo & also radiation to try to shrink the tumor. Those treatments made him feel quite ill, but did little to shrink it. X-rays 2 or 3 months after the treatment showed no change.

While trying to find some other form of treatment, his family researched the Hedge Apple thru Google, & in the process found your web site. They figured it was worth a try. They were able to drive out to the countryside & find the Hedge Apples on a farm & brought some back. They keep them frozen & grate doses off them. He takes 1 tblsp. (mixed in juice or water) 2 times a day, once in the morning & once at night.

After 3 months of use, (unknown to the Dr.) the Dr. wanted him back in for a progress X-ray to see if the tumor was growing since the Chemo & Radiation. The X-ray showed NO Tumor, nothing visible. (It had been close to the size of a golf ball) They told the Dr. about the Hedge Apple treatment, to which the Dr. smiled & shrugged. He of course couldn't prescribe anything like that.

He continues with the dosage, intending to stay on it from now on. He may cut it to a one dose daily maintenance dose eventually. I will add that he is a heavy smoker & was also told he had Enphasemia (may have spelled that wrong) which seems to be milder than it was, also. He continues to smoke at the same rate. When he was first diagnosed, the Dr. said he would be lucky to live another year to a year & a half. He is well past that, going on 2 years or so since the Dr.'s prediction.

I have since suggested using this treatment to 2 other persons having poor results with Chemo & Radiation. They are in the process of doing their homework on it & I hope they will follow thru with it's use. As I hear more from them I'll let you know. One is a young woman who had a mastectomy & found more cancer in another area & the 2nd is an older man who's a farmer with severe skin cancer on his hand from years of sun exposure & had his hand amputated & has found out the cancer is in his kidney also. Both of these folks are Kentuckians.

I, of course am keeping these folks names private, as I don't have their permission to reveal their names, but I'll encourage them to contact you personally to tell of their progress. (no promises of course) I've been blessed with family genes that so far in 3 generations have not produced cancer. That makes me doubly anxious to tell as many people as I can about this

amazing treatment. I'm fighting for as many healthy people as I can produce!

**This lady is willing to communicate with anyone, but does not want me to publish her full name or email address. If you want to talk to her, please email me and i will forward it on to her.**

Feb. 8, 2012

The following was forwarded to me from my friend who sells the hedgeapple capsules. This is another success story from one of the people who took the capsules----

This gentleman had lung cancer. He took the hedgeapple capsules, and when he went back for his CT scan, the cancer was gone.. Gene was praising God, and praising his daughter Hallie for sending him the gift of the hedgeapple capsules.

Sorry, I could not get my computer to cooperate. I was just going to copy and paste the email, and for whatever reason, it did not work.

I have had a few people asking me if the hedgeapple capsules work as well as the fresh hedgeapples. I believe this should answer your question. I see no difference in the effectiveness. My friend prefers not to have her phone number posted on the internet. So, for the people who are very serious about trying the hedgeapple capsules, and wish to order them, just email me and i will give you her contact information. [logcabin1999@yahoo.com](mailto:logcabin1999@yahoo.com)

Recently i stumbled across a very informative website. It's called [www.earthclinic.com](http://www.earthclinic.com) This website teaches the readers about natural ways of healing, cancer included. Were you aware that you should be on an alkaline diet if you have cancer? Cancer cells thrive on sugar. Were you aware that food grade peroxide can heal you of ulcers, and many other ailments? You'll learn about things like this on [www.earthclinic.com](http://www.earthclinic.com) Check it out, it could save your life, or the life of a loved one.

Here is another website that might be of help to you.

[www.cancerfightingstrategies.com](http://www.cancerfightingstrategies.com)

January 6th, 2012

Here's another inspiring story about man's best friend who had cancer. Hedgeapples not only help humans, but animals as well. Don't put your beloved friend down before first trying hedgeapples.

From: " Bruce, Elizabeth L " <Elizabeth.L.Bruce@ehi.com>

Subject: Hedge Apples

Hi Judy. 8 months ago our 12 year old dog, Shelby , was diagnosed with "untreatable" cancer that had already spread to her lymph nodes.

The vet sent us home and said that soon, the cancer would overtake her heart, lungs, and other major organs.....and that we needed to prepare ourselves for such.

We were devastated, as she has been like one of our children and we love her so much. Near the time of her diagnosis, we were also having problems with spiders in the house, and a co-worker brought us some hedge apples from his farm.

I got on the internet to research the apples as a spider repellent when I came across your

website about the hedge apples and cancer.

Like many on your site, I figured "why not give it a try?!?"

Our Shelby was only expected to live a month or so, but it has been 8 months and at her last vet visit, they said her lungs,liver and major organs were all still clear of cancer. The vet couldn't believe it!

She still does have skin cancer sores, so was wondering, in your experience, should I keep giving her the apples orally or should the skin cancer be treated differently?

Thank you so much for your web site. Even if we do lose Shelby , this extra time with her (that I feel is due feeding her the apples) has been such a blessing.

I would appreciate any information or insight you have with regards to the skin cancer. She has large open sores that we are currently treating with antibiotic power and ointments.

Sincerely,

---

Latest good news update!!!

I received a phone call today from a lady in Menifee County, KY. She was wanting the name and phone number of my friend who has the dried hedgeapple capsules. She informed me that a neighbor had been told by a DOCTOR in Lexington, KY to go get some hedgeapples for his cancer. I don't know the doctor's name, but if i find out, i will certainly post it here.

Thank God, the medical community is starting to recognize the healing properties of the Hedgeapple, also known as Osage Orange.

you don't have hedgeapples in your area, and wish to have the fresh ones, this lady in Danville, Kentucky will ship them to you for the price of shipping

[KFOWLER0005@kctcs.edu](mailto:KFOWLER0005@kctcs.edu)

Her name is Kayla Fowler

Also, don't forget my friend in Williamstown Kentucky has hedgeapple capsules for sale. Email me for her name and phone number.

[logcabin1999@yahoo.com](mailto:logcabin1999@yahoo.com)

A word of warning to those of you who might have a latex allergy. This has just come to my attention.

Read the copied statement below.

Also, don't apply the sap of the hedgeapple directly to your skin. It can cause a burn in some people. Always eat something and drink a glass of water if you are taking it internally.

If you would like to buy **hedgeapples in capsule form**, I have a friend who dries them, and places them in capsules. It works just as well as the fresh hedgeapples. Just give me a call, and I will give you her phone number.

Please email me if you need further information about

hedgeapples.[logcabin1999@yahoo.com](mailto:logcabin1999@yahoo.com)

Sorry folks, it's been a long time since I have posted any new information.

A few weeks ago a lady from Shelbyville , Kentuckycalled me. She was desperate after learning she had cancer in her kidney. She previously lost her other kidney. At the time I didn't have any fresh hedgeapples. So, I referred her to a friend who dries the hedgeapples, and puts them in capsules. So, she usually has them the year round. She then contacted my friend, began taking the hedgeapple capsules. She now reports that her tumor is gone and she is in remission. Her minister also called to say what a miracle from God that she is healed.

August 25th, 2011

You might have read a few years ago, I gave a little English Bulldog fresh hedgeapples because he had a tumor on his side. Vet wanted to put him down because he thought he had some sort of nerve damage, causing him to be paralyzed in his hind legs. Well now, I have another animal story.

A lady called me several weeks ago saying her horse had growths on it's body causing it to lose useage of it's legs. She had already made an appointment to have her horse put down, but learned about the hedgeapple in the meantime. I told her a place where she could find fresh hedgeapples. She contacted the gentleman, and began giving her horse an entire hedgeapple daily. In just a week, the tumors were getting smaller, and the horse could walk better. I haven't heard lately, but hopefully by now the horse is back to normal. I didn't get her number, so if she should read this, please call me and give me a report on your horse.

**Here's a word of caution:** If you are giving an entire hedgeapple to your large animal. Cut it up in small pieces. Hedgeapples have been known to kill a horse or cow, simply because it gets caught in their throat and they suffocate. Animals know that the hedgeapple is good for them, otherwise they wouldn't try to eat them. Deer and squirrels also eat them.

**Rubber tree:** This plant is in the same family (**mulberry**) as the ficus. It's actually called Ficus Elastica. This plant is very popular with allergy sufferers because it's said to remove dust from the home by collecting it on its leaves. This plant's close relative, the Brazilian Rubber Tree, is one of the more common sources of latex in manufacturing. Its sap, which hardens when drying, produces the rubbery substance that is processed to form gloves, balloons, condoms, etc. **If you are allergic to latex, this plant is definitely a no-no in your home.**

(While surfing the web, I came across the above information, and had to list it here. The Mulberry, Fig, and Hedgeapple are all in the same family, and as it states, so is the Rubber Tree. **So, if you are a person who has an allergy to latex, it would be best not to use the hedgeapple.**

**I cannot be responsible for any adverse effects, or problems that might arise by using or ingesting the hedgeapple, otherwise known as the Osage Orange.)**

Hedgeapple - Osage Orange

An alternative treatment for Cancer

Looking for a place to purchase hedgeapples?

Check out these two websites

[www.osageapple.com](http://www.osageapple.com)

[www.hedgeapple.com](http://www.hedgeapple.com)

## Healing in scripture

Balm, figs and oil are the only plant products mentioned in the Bible with reference to healing. In Jeremiah the prophet cries: Is there no balm in Gilead? Is there no physician there? (8:22). Isaiah prescribes a lump of figs for King Hezekiah's boil (38:21) and speaks of bruises and sores and bleeding wounds that have not been drained, or bound up, or softened with oil (Is 1:6).

(Figs as well as the mulberry tree are in the same family as "Hedgeapples") So, as you can see figs were used in biblical times for healing.

For many, many, years housewives have known that the hedgeapple would keep spiders & other bugs out of their home.

Now, studies have found that a substance in Hedgeapples can kill cancer cells. Many people in our area have been having miraculous success after using the hedgeapple two to three weeks.. I don't claim to understand why it works. All I know is that it does work.

NO, the hedgeapple is not poisonous, if it was, I would already be dead. I have been using it now for years, just to help prevent cancer. I've found that my cholesterol has dropped around 50 points, and small facial blemishes are going away. When I began using the hedgeapple, I wasn't aware of all the other beneficial properties it contained.

About 5 years ago I learned from an elderly gentleman in our community, that claimed he was cured of colon cancer after using, or taking hedgeapples. He now tells everybody about the hedgeapple. He has many stories of claimed cures or people who are in remission.

I personally make no claims for cures, nor will I have any responsibility for any adverse effects that anyone might have after ingesting, or applying, the hedgeapple in or on their body.

However, I do take a capsule daily as an alternative preventive measure.

## Miracle in Arkansas

Several weeks ago Amy S. from Lowell Arkansas wrote asking if I had any hedgeapples. Her father had bladder cancer, and her father was willing to try the alternative treatment. At the time, I had a few hedgeapples left, and mailed her one. She emailed me a few days ago, saying her dad started taking the hedgeapple on Mother's Day. In just a few short weeks, he went back to the doctor for tests, and thank God, he is cancer free!!!!!!

## Another miracle story

In February a guy from Tennessee emailed me asking if I had any hedgeapples. Both his parents had cancer, but had no health insurance to pay for expensive treatments. I sent two hedgeapples to his parents. A few days ago, his mother mailed me the postage with a note saying, her husband had a cancerous growth on his ear that had been there for 4 years, plus she had a growth on her neck. After they both used the hedgeapple for a few weeks, the cancer is totally gone from her husband's ear, and the cancer on her neck is almost gone.

Two weeks ago, I saw Mr. Hedge at a banquet. You will learn more about Mr. Hedge as you read on down the page. Anyway, I'm always glad to see him and his wife, and to learn new miracle stories. We were talking after the banquet was over, and he said, "see that man over there, he and his wife both had cancer, they got a hedgeapple from me, and now they are both cured." I always tell him he needs to write a book, but he's afraid to, for fear he will get in trouble with the medical community. He knows too many people who have been cured of cancer, and has hundreds of stories to tell. What a shame he can't put this into a book, for the whole world to read. I'm trying to do my part in sharing Mr. Hedge's stories, as well as my own. I'm finding just as many people finding relief from arthritis, as they are from cancer.

I'm not telling people to not go to their doctor. I'm telling people if you are looking for an alternative treatment for cancer, and do not want to have chemo and radiation, or maybe you

have no insurance, or possibly the insurance you do have, doesn't pay for cancer treatments, check into the use of Hedgeapples. I can put you in touch with several people who have had cancer, and now they are cancer free.

This letter shown below is just one example of the many, many, people who are using hedgeapples with very positive results. As the email indicates, she is willing to share her email address in hopes that she can help other cancer patients who might be skeptical of trying an alternative cancer treatment. If you are using hedgeapples to treat your cancer, arthritis, or other ailments, please share your story too.

Thanks, Judy Mullins

"norberttac@aol.com" <norberttac@aol.com>

To:

logcabin1999@yahoo.com

Dear Judy,

I will make this brief even though my story takes place over 2 years now. In early 2007 I had a routine CBC and I was diagnosed with CLL (Chronic Lymphocytic Leukemia). I refused the traditional treatment of Chemotherapy and soon after started with some experimental medication. I had no real symptoms except for being tired. My CLL was Stage 0 which meant that my leukemia was indolent or slow growing. In mid 2008 appeared to be in Stage 1 as my lymph nodes were larger than normal. I also started having severe pain in my head and a tumor was found. I was to have a biopsy but around that time my best friend, a gentleman who knows "Mr. Hedge" personally started telling me about the hedgeapple. He brought me a couple approximately 4 months ago and I started eating about a teaspoon each day. Along with his hedgeapples and many prayers I am now having near perfect blood tests and a recent bone marrow aspiration shows little sign of the CLL. After 3 CT Scans it appears that the tumor is much smaller. I would love to give you more detailed information if you like, but this is the synopsis of my story. Please feel free to share my story with others and I give you permission to give out my email address.

Thank you,

Maggie

March 2009

I just learned a few days ago that the lady in Tennessee, originally diagnosed with Cirrhosis of the liver, has now been told by her doctor, there is no Cirrhosis present in her liver.

I'm awaiting word from the gentleman in Northern Kentucky, who has hepatitis C and arthritis. His wife suspects his tests will show the hepatitis is gone, or nearly gone. I will keep you updated as I learn new information.

**February, 2009**

**Latest update:**

A few months ago, a lady called me to see if I had any hedgeapples. She was calling for her husband who had Hepatitis C I explained I had never heard of anyone using it for hepatitis, but it never hurt to try. A few days later, she and her husband, and son came to our farm. I removed a hedgeapple from the freezer, and shaved off a few pieces. I always take a few bites when showing it to someone for the first time. I feel if they see me take a bite, they don't have to worry that it's poisonous. A week or so later, she wrote to say he was feeling better. She continues to give me updates. The pain in her husband's liver is nearly gone. But one added benefit, we weren't expecting. He had very badly swollen knees, due to arthritis. The swelling in

his knees is totally gone, and he can walk without pain. The benefits of using hedgeapples are endless.

December 25, 2008

I just learned tonight of another miracle. My nephew Randy, had shown us at our Thanksgiving dinner a growth on his arm, about the size of a hen egg.

Since then he had been cutting firewood, one of the trees was a hedgeapple. He said the sap got all over his arm and gloves. He didn't realize the healing properties of the hedgeapple, but was showing us his arm tonight, and the growth is gone I explained how everyone is being healed from cancer and other medical conditions, by ingesting, or using topically, the hedgeapple.

People have asked me what does a hedgeapple taste like? It's hard to describe, maybe something like a cucumber or green tomato. A cousin just recently stated that he thinks it tastes like watermelon rind. It doesn't have an unpleasant taste. It doesn't burn your mouth, or your hands, as some people might think.

I have read on some websites that hedgeapples cause dermatitis when the white milky substance gets on your skin. If you have sensitive skin, it's best not to let the milky latex get on your skin. You should be especially careful around your eyes. Wash your hands thoroughly after touching the hedgeapples.

More wonderful news!!! I have a friend who was diagnosed with bladder cancer over a year ago. She had 3 different tests that confirmed she had bladder cancer. She began taking the hedgeapple daily. Last year, she went in for surgery, and to the doctor's surprise, the tumor was gone!!

Thank God for hedgeapples is all I can say!!

I continue to hear wonderful stories on a regular basis. As I've already mentioned this, but it bears mentioning again. If you believe this is just a coincidence, or you don't believe in alternative medicines, just look up this word (tetrahydroxystilbene) This is the chemical found in hedgeapples. Studies have been done on cancer cells, using this chemical, and it has been scientifically proven to reduce the growth of cancer cells. Why oh why can't our doctors & the drug companies let everyone know that people can be cured of cancer?

Before using the hedgeapple, Consult a professional herbalist, and your doctor before starting treatments. Please don't use this herbal treatment instead of your doctor's medications. However, if the doctor tells you, they've done all they can do. why not give it a try, what do you have to lose?

#### REQUESTED INFORMATION

I've been getting phone calls about how to take, or use the hedgeapples. So, here is the whole story about what the elderly man described to me. Just to give him more of a personal image, but to not invade his privacy, I will give him a name. His name will be Mr. Hedge.

Back in the 1940s, Mr. Hedge knew a man that had a cancerous growth on his neck. One day his wife noticed that the growth was getting smaller. They tried to think what he had done differently that could have made a difference in the size of the growth. He was a farmer, and had been clearing some limbs from hedgeapple trees. The job went on for sometime, and the cancerous growth kept getting smaller. The sap that came from the hedgeapple tree, and the fruit, had gotten on his gloves. He kept swating flies on his neck with the sappy gloves, till finally, the growth kept getting smaller until eventually it was gone..

So, when Mr. Hedge was diagnosed with colon cancer, plus he had spots on his liver, his mind went back to the 1940s, and he remembered his neighbor claimed he had been cured of skin

cancer. Mr. Hedge decided to just try taking a teaspoon or so daily, to see what happened. Just like my 84 year old friend, Mr. Hedge was scheduled for one more test before the actual colon surgery. Well, to the doctor's amazement, the cancer was gone from his colon, plus the spots on his liver were also gone.

Last year I went to Mr. Hedge's house to get a frozen hedgeapple, when I learned my husband's aunt had cancer. This is the way he showed me to use the hedgeapple. (First of all he wraps the hedgeapple in newspaper, then places it in a plastic bag, and puts it in his freezer.) His demonstration was as follows: Remove the hedgeapple from the freezer. Put it on your counter, get a sharp knife, and just shave off a teaspoon or so. It comes off in little pieces, sorta like, if you were slicing off broccoli. Mr. Hedge, just swallows the shavings down. He doesn't chew it, and follows with a glass of water. Mr. Hedge uses the entire hedgeapple, starting with the outer peeling. He also likes to eat a little something after taking it. I personally find it has a mild taste, and doesn't burn your mouth or tongue.

On election day, I ran into Mr. Hedge again. He was telling me of another lady in our county, who had cancer. He gave her a hedgeapple, and now her cancer is gone.

I forgot to say earlier, Mr. Hedge told me of someone who had a dog with a cancerous tumor. Guess what, the dog's cancer is gone too. So, you can't say that this is a mind over matter thing.

So, I personally know of people who have had, bladder cancer, colon cancer, breast cancer, skin cancer, liver cancer, and leukemia. It seems that it makes no difference what type of cancer you have, or if you're a human being, or an animal. The "Hedgeapple" seems to be a miracle.

I would just love to tell the whole world about the miracle healing power of the "Hedgeapple" I have done some extensive research on the internet, and have found that "Hedgeapples" contain a chemical called

Tetrahydroxystilbene.

I was determined to find medical technology to back up the claim that Hedgeapples can have amazing results on cancer in most cases, if caught in time. To my surprise, not only has research been done on cancer, but Aids, arthritis, cholesterol, & antiaging.

Don't just take my word for it, check out the chemical compound, and decide for yourself.

God certainly plays the major role in these healings. He's the one that created the "Hedgeapple" for our use. Please know there is still hope for those of you who have been given the death sentence. So, if you've tried all the treatments your doctor has prescribed, give the "Hedgeapple" a try.

I would welcome stories from anyone who has experienced amazing results after using hedgeapples.

Just email me at [logcabin1999@yahoo.com](mailto:logcabin1999@yahoo.com)

You will find websites where you may purchase hedgeapples. I don't personally sell them. I just want to get the word out to as many people as I possibly can, about the wonderful, miracleous, properties of the Osage Orange, better known in our area as "Hedgeapples".

**The statement below is a quote from author, Ty M. Bollinger**

The bottom line is that cancer patients deserve to know the truth and to make choices based upon this truth. And the truth is that the **proven cancer prevention strategies and the real cures**

for cancer do not need a prescription, nor do they require surgery or barbaric procedures like radiation or chemotherapy. If you will allow yourself to step outside the box and actually think for yourself, then this book may save your life or the life of someone you love.

God Bless,

Ty M. Bollinger

I am constantly searching for new information about tetrahydroxystilbene, the chemical found in Hedgeapples.

I'm not a doctor, nurse, or chemist. However, this article indicates to me, that tetrahydroxystilbene has been found to inhibit the growth of Melanoma cells (skin cancer) The following was taken from the website [www3.interscience.wiley.com](http://www3.interscience.wiley.com)

#### Research Article

A potent tyrosinase activator from Radix Polygoni multiflori and its melanogenesis stimulatory effect in B16 melanoma cells

#### Keywords

tyrosinase melanogenesis 2,3,5,4 -tetrahydroxystilbene-2-O- -d-glucoside  
anthraquinone Radix Polygoni multiflori

#### Abstract

Tyrosinase is a key enzyme in melanin biosynthesis. Activators of tyrosinase with stimulatory effects on melanogenesis are beneficial for the treatment of hypopigmentation diseases. In the present study, mushroom tyrosinase activity assay was performed to screen tyrosinase activators from traditional Chinese herbs. Four components from Radix Polygoni multiflori were tested. The most active compound,

2,3,5,4 -tetrahydroxystilbene-2-O- -d-glucoside (THSG), was found to be a significant tyrosinase activator. The maximal activation was 126% at a concentration of 75.0 g/mL. The three anthraquinones slightly activated tyrosinase with effects in the range 7-31%. All the compounds were tested in B16 melanoma cells, the anthraquinones were found to inhibit cell proliferation at a concentration of 0.1-2.5 g/mL, and THSG was found to be non-cytotoxic at a concentration of 0.1-12.5 g/mL. THSG significantly increased the activity of murine tyrosinase and stimulated melanin biosynthesis in B16 melanoma cells. In conclusion, THSG is a potent tyrosinase activator and stimulator of melanogenesis with potential for the treatment of hypopigmentation disease. Copyright 2008 John Wiley & Sons, Ltd.

Thanks, and may God bless you.

Judy Mullins

The information you are about to read is just a portion of an ezine I receive on a regular basis, regarding medical myths, and cheap ways we can help heal ourselves.

The author is William Campbell Douglass II, M.D.

## HYDROGEN PEROXIDE

Go ahead and laugh if you like, but what follows is no joke:

- DID YOU KNOW that your own white blood cells produce hydrogen peroxide? Yes they do. Lots of it.
- KNOW WHY? Because that's how they kill invading germs. It's your body's first and best defense against any infection. Kills bacteria, viruses, yeast, parasites all the bad guys.
- DON'T BELIEVE ME? Look it up. (Try the Encyclopedia Britannica website. Check the info on "granulocytes." See? I told you so.)

BUT HOW? The hydrogen peroxide molecule (H<sub>2</sub>O<sub>2</sub>) is basically water (H<sub>2</sub>O) with an extra oxygen atom attached. When that oxygen gets released against germs, it "oxidizes" them. Poof, they're goners.

And this shockingly cheap therapy was a real health miracle for my patients in Africa, where the ungodly high cost of drugs condemns millions to death every year.

So how do drug companies get away with selling expensive antibiotics, when we've got this stuff that's nearly free? You'd call me paranoid if I told you. But I'll tell you anyway in your FREE BONUS GIFTS, plus how to find a doctor skilled in this secret miracle.

I'll explain how it's done in your FREE BONUS REPORTS, along with some very nifty "minor" applications. It can be used topically to clear up sinus infections, erase benign moles and even clear up periodontitis without surgery. No kidding. You'll see.

Getting intrigued? I'm just warming up...

Hi Judy,

Your system of grating/scraping the frozen hedgeapple for use is a great one. I often place the gratedhedge apple in a banana split from end to end, and sprinkle it with stevia. Also, for those who don't particularly like the taste of the hedge apple, I find that mixing the scrapings with apple sauce makes it palatable.

Have a good weekend,

**Subject:** Re: Hedge Apples

Hi Judy,

Thanks for your response. I read through the articlesabout hedge apples last year on your website, and decided, based on the weight of the articles, to gather some. I ate some several times, and made whiskey and olive oil tinctures for home use. Based on your positive comments yesterday about other people reporting good results in treating cancer to you, as well as the cancer clinic's interest in the hedge apple in California, I plan to get back to using the hedge apple, and encourage my family and friends to do so. My cousin who lives below Atlanta, has passed the link to your website on to some people he knows with cancer. I will

copy to him with this email so he can share your comments with others.

Last fall I gathered several hedge apples and froze some them whole, and some in cut-up chunks, to have on hand. I don't know how long they will be useful that way. I do plan to collect some more of them later this year when they start falling from the trees.

Best regards,  
Ben Pellom

Ben,

Yes i definitely feel as strong or actually stronger about the effectiveness of hedgeapples. Yes, i certainly am getting more reports from others. As a matter of fact there is a cancer clinic in California that has recently contacted me. They have several patients that are in remission after using hedgeapples. They were wanting to purchase large amounts of hedgeapple capsules from my friend that dries them, and puts in capsules. She is willing to work with patients on an individual basis, but is not willing to make the capsules as a shelf item, without first discussing the proper way to use them. She feels if you are currently taking chemo, you should not take the hedgeapple capsules.

May i ask why you are asking me about the effectiveness of hedgeapples ? Have you taken them, or eaten the fresh hedgeapples? I am so confident that they work, if i were told i had cancer, I would not take chemo. I would just double up on my intake. I currently take 1 capsule a day just as a preventive measure. I know of too many people who are now in remission to ever doubt the effectiveness of hedgeapples.

Thanks for writing, and if you have further questions, just let me know.

**Subject:** Hedge Apples

Hi Judy,

I have passed a link to others regarding the articles posted on your website regarding the use of hedgeapples for cancer. In that regard, do you still feel as strongly about the effectiveness of using hedge applesto cure cancer? Also, are you still getting any reports from others on the effectiveness of hedge apples?

Thanks and best wishes,

Ben Pellom

<http://classicalformulas.com/ReadingRoom/OsageOrange.html>

Osage Orange  
(*Maclura pomifera*)

by Dr. Les Moore

Osage Orange has traditionally been used as a treatment for cancer by Native American and folk herbalists. It is a botanical medicine encompassing unique constituents that exhibits anti-cancer activity with promising potential. A new class of lectins has been isolated from Osage Orange- prenylated isoflavones. The prenylated isoflavones are pomiferin and osajin.

Osage Orange has a strong resonance with the Doctrine of Signatures. Osage Orange has been recognized due to its shape which resembles a large tumor or fibroid. Its orange-red colored bark is associated with the color of blood, therefore it has been used traditionally in blood cleansing and blood movement. Utilitarian uses include the making of traditional bows. It is sometimes referred to by one of its common names, Bow D'arc, which means wood of the bow. It is considered one of the best bow woods and is ranked among the Yew and the Pau D'arco, which are two of the top woods used in the construction of bows as well as anti-cancer botanicals. Osage Orange is an active ingredient in the formula Three Bows prescribed to treat cancer.

### Constituents

- Maclura pomifera agglutinin (MPA) is a lectin/mitogen compound.
- Macluralisin is a serin proteinase.
- Pomiferin is a prenylated isoflavone, which acts as an antioxidant by inhibiting cytochrome P-450 enzymes, and inhibits LDL oxidation, a key process that is currently believed to play a central role in arteriosclerosis.
- Osajin is also a prenylated isoflavone.
- Phytoestrogen used in cancer and cardiovascular disease treatment.
- Tetrahydroxystilbene is an anti-fungal agent.

### Maclura pomifera agglutinin (MPA)

- Highly specific for the tumor antigen Gal b1, 3 Gal Nac, a cell marker on some tumors. This is a core structure of the O-linked type of glycopeptide.
- Has been used in immunology as erythroagglutinin, as markers in cell differentiation, in cancer biology as labels of carcinoma cells, in glycoprotein purification, and as probes in developmental biology.
- It has shown to be detrimental to growth of larvae and to block HIV infection.
- sequence of MPA, specifically for CHO and its lack of metal ions and disulfide bonds, all indicate it to be a member of a new lectin family.
- It has a high affinity and specificity to bind tumor antigens on the surface of carcinoma cells from which 85% of cancer develops.

### The Role of Lectins in Disease Treatment

- From the Latin word legere, the word lectin means "to bind" or "to pick and choose".
- Lectins are non-immunologic protein-polysaccharide molecules having a strong binding affinity for the complex carbohydrates, which are abundant on cell surfaces.
- Forming an irreversible covalent bond, lectins bind in a manner similar to antibodies.
- Galactose/ N-acetylgalactose-amine (Gal/GalNAc) lectin on the macrophage surface is involved with the uptake and recognition of tumor cells.

- Concentrations of lectin needed to produce a therapeutic effect are on the order of microgram doses.

## Dosage

- Take 10 drops twice daily.
